DANSAND® Ball Topdressing

Topdressing for sports fields and green areas

Description

DANSAND® Ball Topdressing is an economical choice for simultaneous topdressing and addition of nutrients. Ball Topdressing is composed of washed silica sand, ground sand and compost. The efficient mix allows the roots to breathe and ensures strong drainage of the surface. Added compost contains microorganisms to make nutrients available to the plants, improving the soil's capacity to store organic nutrients. The nutrients are released slowly, giving the roots optimum growth conditions.

By topdressing your sports field or green areas with DANSAND® Ball Topdressing, you will get a better, more uniform and even surface without traces of wear while giving the grass very good growing conditions. DANSAND® Ball Topdressing is well suited for topdressing and nutrient addition at teeing areas.

BENEFITS OF DANSAND® BALL TOPDRESSING

- Topdressing and nutrient addition in one go
- Creates firm, even surfaces with no traces of wear
- Improves the soil's capacity for nutrient storage

Product specification

DECLARATION

Product description: Topdressing with compost for sports fields, green areas and teeing areas. Product number: 400076

STORAGE

Covered and with no risk of contamination

DELIVERY

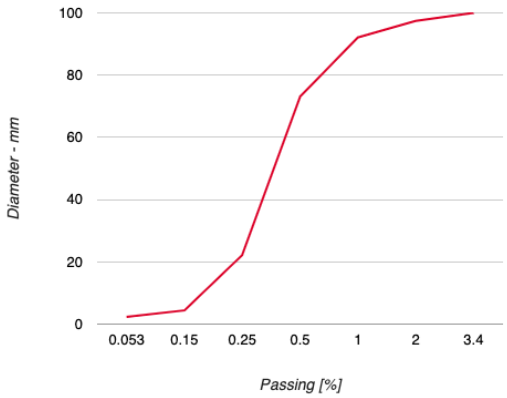

The product is delivered loose as a bulk item.
