Dansand® Airaid

Extra stability and draining capability

Description

DANSAND® Airaid is used to fill holes arising during aeration and as topdressing when reseeding the grass or as winter hardening. DANSAND® Airaid is highly suitable for soil with a high clay content. Consisting of round-edged and washed silica sand, DANSAND® Airaid has an overweight of coarse grains and is at the upper end of the USGA curve.

Compared to the finer-grained DANSAND Superdres®, the coarse silica sand gives extra stability and improved water permeability in the soil. Both varieties of topdressing are fine-tuned to give the ideal playing surface. A combination of DANSAND Superdres® for ongoing topdressing and DANSAND® Airaid for deep aeration or plugging will give your grass the perfect growing conditions. DANSAND® Airaid has a maximum grain size of 1 mm. This makes the topdressing resistant to cutting equipment and minimises the amount of cut grass collected in the cutting boxes - and gives you all the benefits of increased drainage.

BENEFITS OF DANSAND® AIRAID

- Gives extra stability and improved drainage
- Suitable for clay-rich soil
- Washed and free from clay and
- Suitable in a combined topdressing programme with DANSAND Superdres®
