Dansand® Fairway sand 0-1 mm

Extend the golf season

Description

DANSAND® Fairway is specially developed for top dressing of fairways. The product has an optimal grain curve and is based exclusively on round-edged silica sand that has been washed clean of clay, fines and organic material. Over time, the addition of DANSAND® Fairway improves the structure of the soil profile, provides higher permeability and improved growth conditions for the plants. The product is an effective way of preventing wet areas on the fairways, thus prolonging the season for golfing.

BENEFITS OF DANSAND® FAIRWAY 0-1 MM

- Pure silica sand with an optimum grain curve
- Prevents wet areas on the fairways, prolonging the season for golfing
