Dansand Superdres®

Even, healthy greens

Description

DANSAND Superdres® is specially developed for the continuous top dressing of greens. Superdres® consists of round-edged silica sand washed completely clean of clay, fines and organic material. If Superdres® is part of a regular topdressing program, it is a very effective means of diluting felt in greens and creating smooth, firm surfaces.

The grain curve follows the USGA's recommendations with a predominance of medium-sized grains. It provides an airy product that does not pack, but instead provides plenty of air to the roots and ensures optimal surface drainage.

Superdres® does not contain sand grains over 1 mm, making the top dressing gentle on both cutting equipment and golfers - even on the day where topdressing has been laid out.

ADVANTAGES OF DANSAND SUPERDRES®

- Thins out felt and creates smooth, firm surfaces
- Provides light and air to the roots
- Free from clay, fines and organic matter
- The grain curve follows USGA recommendations
- Gentle on cutting equipment
