Product designation:

DantoPlug®

Superior plugging against seepage and water flow

Description

DantoPlug® from Dantonit is pure Danish bentonite in pill form for decommissioning and plugging of wells, separation of aquifers and filters for wells. With DantoPlug® you get a tight plugging, as the bentonite clay will absorb water at a ratio of 1:7. DantoPlug® is produced in a way that delays the onset of swelling without weakening either swelling ability or pressure. DantoPlug is available in pill form Ø 7-12 mm.

BENEFITS OF DANTOPLUG®

- Complete and permanent sealing of boreholes
- Very tight plugging effect
- Made from Danish bentonite
- Adds no contaminants to groundwater
- Available in several sizes

Specifications

DECLARATION

Made from pure Danish bentonite

STORAGE

Dry, covered and without risk of contamination.

DELIVERY

15 kg bags.

ENVIRONMENTAL INFORMATION AND DISPOSAL

Prevent dust. Packaging and used filter material should be disposed of in accordance with local requirements.

Manual

APPLICATION

Dantonit recommends that the borehole be filled at a slow and steady pace. It is also recommended to carry out inspection measurements along the way to ensure that the borehole is filled homogeneously and completely.
